## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 12 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maley et al. in view of Tingle.

The patent to Maley et al. discloses a fuel injection device comprising a magnetic valve 30 for controlling fuel flows, which valve, in one of its positions closes a damping chamber 110 (Column 5, lines 55-64) in the valve 30 that communicates constantly with a relief chamber via a damping throttle 96. Maley et al. do not disclose the damping being adapted to throttle in both laminar and turbulent fashions. The patent to Tingle teaches that laminar and turbulent flows in a fuel injector are determined by the Reynolds number which is determined by the fluid density, conduit inner diameter, flow velocity, and the fluid viscosity, wherein a Reynolds number below 2300 is laminar and above 2300 is turbulent. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have adapted the damping throttle in both laminar and turbulent fashions since such adaptations are based on the Reynolds as taught by Tingle. In this case, the flow velocity will determine the laminar or turbulent fashions.

***Allowable Subject Matter***

Art Unit: 3752

3. Claims 13-15 and 17-26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Paul et al., Wells et al., Ausman et al., and Henkel are pertinent to Applicant's invention.
